

(Top) The impact of whole program analysis on precision. Each bar gives precision in %bitwidth reduction.

(Middle) The impact of the e-SSA transformation on precision. Bars give the ration of precision (in bitwidth reduction), obtained with e-SSA form conversion divided by precision without e-SSA form conversion.

(Bottom) The impact of the number of iterations before widening on precision, for the inter procedural analysis without inling. Each bar gives precision in %bitwidth reduction.
